1. Structure Overview

The Supply Chain Management Dashboard is designed in Microsoft Excel to provide a comprehensive overview of sales performance, profitability, order volume, and category-level insights. The dashboard is structured into five major sections:

A. KPI Summary Section (Top Panel)

This section provides high-level performance indicators:

- **Sales:** ₹2,53,05,345.41
- **Profit:** ₹22,56,420.66
- **Quantity Sold:** 55,297 units
- **Number of Orders:** 10,000
- **Year-over-Year (YoY) Growth:** Approximately -79% (decline observed across KPIs)

These KPIs help management quickly assess overall business performance.

B. Filters Panel

Interactive slicers allow dynamic filtering by:

- **Years:** 2023, 2024, 2025
- **Region:** East, North, South, West
- **Customer Segment:** Enterprise, Retail, Wholesale

This improves usability and enables multi-dimensional analysis.

C. Sales & Profit Analysis

A monthly comparison chart displaying:

- Total Sales (Primary Axis)
- Total Profit (Secondary Axis)

This helps track seasonal trends and performance fluctuations across months.

D. Category-Based Analysis

1. Category-wise Profit (Bar Chart)

- Automotive
- Home & Kitchen
- Clothing
- Health & Beauty
- Electronics
- Grand Total

2. Category-wise Sales Share (Pie Chart)

Each category contributes approximately 19–20% to total sales, showing a balanced portfolio distribution.

3. Top 5 Categories (Horizontal Bar Chart)

- Skincare
- Decor
- Tyres
- Cookware
- Fitness Equipment

E. Geographic Analysis

A world map showing country-wise sales distribution for identifying high-performing markets.

2. Problem Definition

The primary objective of this project is to:

- Monitor supply chain performance across regions and categories.
- Identify declining trends in sales and profit.
- Analyze category contribution to profitability.
- Evaluate regional and customer-segment performance.
- Support data-driven strategic decisions.

Key Business Questions Addressed:

- Why is there a negative YoY growth (~ -79%)?
 - Which categories contribute most to profit?
 - Are sales evenly distributed across categories?
 - Which countries generate maximum revenue?
 - Which product categories dominate top sales rankings?
-

3. Data Visualization Approach

The dashboard uses multiple visualization techniques for better analytical clarity:

1. KPI Cards

- Display overall performance metrics.
- Include YoY trend indicators.
- Provide quick executive-level insight.

2. Dual Axis Column Chart

- Monthly Sales vs Profit.
- Helps identify margin trends and cost inefficiencies.

3. Waterfall/Bar Chart (Category-wise Profit)

- Shows profit contribution by category.

- Helps in identifying high-margin segments.

4. Pie Chart (Sales Share %)

- Displays distribution balance.
- Reveals portfolio diversification.

5. World Map Visualization

- Geographic sales concentration.
- Supports market expansion strategies.

6. Horizontal Bar Chart (Top 5 Categories)

- Highlights revenue leaders.
- Supports inventory prioritization.

Excel Tools Used:

- Pivot Tables
 - Pivot Charts
 - Slicers
 - Conditional Formatting
 - Map Charts
 - Data Labels & Formatting
-

4. Key Insights

- Sales and profit show a significant YoY decline (~ -79%), requiring immediate investigation.
 - Category sales share is evenly distributed, indicating reduced dependency on a single product segment.
 - Skincare and Decor are leading categories in total sales.
 - Profit contributions are relatively balanced across major categories.
 - Geographic sales spread indicates global presence but possible concentration in specific countries.
-

5. Conclusion

The Supply Chain Management Dashboard effectively provides a centralized and interactive platform for monitoring business performance.

Strengths:

- Clear KPI visibility
- Interactive filters for deep analysis
- Balanced category portfolio
- Geographic sales insights
- Monthly trend analysis

Areas of Concern:

- Significant negative YoY growth
- Potential supply chain inefficiencies
- Need for cost optimization and demand forecasting

Recommendations:

1. Investigate reasons behind YoY decline (inventory issues, demand drop, pricing strategy).
2. Focus marketing and inventory planning on top-performing categories.
3. Strengthen performance in underperforming regions.
4. Implement demand forecasting models for improved supply chain planning.
5. Monitor profit margins closely to improve operational efficiency.
